

Fortavera Prepares. Acronis Protects. Together, Outcomes From Day One.

Fortavera delivers expert M365 tenant hardening, endpoint configuration, and standardized Acronis Cyber Protect Cloud deployment services — creating the secure, governed foundation Acronis is designed to defend. No new tools. No learning curves. Rapid deployment tailored to each client's business context, with the MSP positioned for long-term success.

Day 1

PROTECTION EFFECTIVENESS

JOINT VALUE FOR MSP PARTNERS

Secure Foundation Layer

CIS and NIST-aligned M365 tenant hardening with 1,100+ control settings across Exchange, SharePoint, Teams, Entra ID, and Intune — creating the governed surface that Acronis Email Security, SPM, and DLP are designed to protect.

Rapid, Standardized Deployment

Fortavera delivers hardened baselines and validated Acronis agent deployments in days, not months — with all enrolled endpoints, compliant, and conflict-free.

Operational Cost Reduction

Consistent baselines mean fewer tickets, lower MTTR, and predictable support volume. MSPs manage more seats with the same team — margins increase without raising client pricing.

Client-Outcome Focused

Every engagement is tailored to the client's specific business context and compliance requirements. We set up the MSP for long-term success — not just a one-time configuration event.

HOW IT WORKS

1

Assess

Environment discovery, gap analysis, compliance mapping

2

Harden

M365 tenant configuration, endpoint preparation, Intune enrollment

3

Deploy

Standardized Acronis agent deployment, protection plan validation

4

Govern

Ongoing drift management, documentation, compliance reporting
